■ SoulArt Temple – Shadow Emotion Decoder Category Grid Instructions

■ Purpose:

Create a category selection grid for users to begin their healing session by identifying where the stored shadow emotion originates (e.g., ancestral, heartwall, aura field). This will sit at the top of the Emotion Decoder page before the 7-step process.

■ Location:

Inside Replit, go to the page that loads when you navigate to Emotion Decoder from the membership area. Place this above the start of the 7-step emotion release content.

■ What To Build:

- A Title and Short Introduction Text: • Title: 'Where Is the Shadow Stored?' • Subtitle explaining how to test each category using kinesiology or intuition. Always say 'Thank you' after.
- A Grid of Buttons with the Following 12 Categories: • Common • Aura Field • Ancestral • Etheric • Heartwall • Twin • Third Trimester • DNA • Deeply Hidden • Stealth • Body-Coded • Unknown Origin
- What Happens on Click: • A box appears under the grid showing a statement like: 'This is an ancestral stored shadow emotion.' • Below the statement: reminder to say 'Thank you', and a placeholder for a video guide.
- Design Notes for Style: • Match the SoulArt brand (navy blue buttons with gold text). • On hover, buttons glow or lift visually. • Clean, mobile-friendly, intuitive layout.
- Optional UX Enhancements: • Highlight the active button on click. • Allow user to proceed to the 7-step decoder after selecting a category.

■ Important:

- Do not remove or alter the existing 7-step decoder section.
- The category grid sits above the 7-step flow as a pre-step.
- Ensure the rest of the app (Journal, Quick Release, etc.) remains unaffected.
- Maintain a mobile-friendly and brand-consistent design.
